Brett,

Here is the email I mentioned today – thanks for your help.

Subject: San Jacinto Waste Pit: questions regarding the Access database SJWP_2012-01-04

Dear Mr. Miller,

I just spoke with David Keith about getting some crucial pieces of info that will allow us to link locations to analytes. He said that the ball is currently in your court, as he himself is not allowed to give us that info.

What we need, per Lauren:

Regarding the Access database SJWP_2012-01-04:

I want to be able to map the sample concentrations represented in this database. I have opened all of the tables in the database and what seems like they would be the relevant ones more than once. I cannot find the key that ties the concentration measurements in d_labresult to an x-y coordinate in space.

These are my specific questions:

- 1. Which field in d_labresult provides a unique identifier to the location of the sample?**
- 2. Which table in the database provides the x-y coordinates for that location?**
- 3. Which field in the table with x-y coordinates maps to the field in d_labresult?**

I hope these questions are clear. If they are not or if you need additional information from me, please feel free to call (512.431.7988 voice or text) or

9675594

email me <lauren@[glenrose.com](mailto:lauren@glenrose.com)>.

We are ready to make progress here. I look forward to your help here to get this done.

Thank you for whatever is next,

--
